

With Focus on Quality and Value, Graham Spray Equipment Adds A/R Diaphragm Pumps to Its Lineup of Choice Components

DOUGLASVILLE, GA, March 26, 2018

Graham Spray Equipment is known throughout the lawn spray industry for using only a few proven components in the spray units they custom-build. To provide customers with the best quality pumps and aftermarket service while containing costs, Graham announces it is including A/R diaphragm pumps, manufactured by Annovi Reverberi, among its selection of choice components.

Annovi Reverberi provides private label pumps to the North American market and is regarded as the top manufacturer of diaphragm pumps worldwide. A/R continues to innovate with its patented BlueFlex® diaphragms, which provide longer life and improved chemical resistance. Its pumps are used in a wide variety of spray applications, including lawn, tree, and shrub care, across 85 countries. Graham will be using the proven AR-30, AR-40, and AR-50 pumps in the spray units they configure for their customers.

“We want to assure our customers that we haven’t switched to some new, untested component in their spray units. A/R diaphragm pumps deliver everything we, and our customers, want from the highest quality spray equipment.”

– Donny Pitts, Graham General Manager

Graham spray units are known for longevity, reliable performance, and easy maintenance. This reputation comes from careful craftsmanship and using only components that stand the test of time. Graham also provides lifetime support and often talks a customer through maintenance or a repair over the phone, making it essential that service techs at Graham are thoroughly familiar with the workings of the component parts they use.

The A/R pumps, their repair kits, and the AR-GI 40 pressure regulator are available on Graham’s online catalog of replacement parts.
